

ABSTRACT

A piezoelectric transformer comprises at least two flat piezoelectric substrates (1, 2, 3) each having opposite major surfaces provided with electrodes, and the piezoelectric substrates are joined with at least two spacers (4a, 4b, 4c, 4d) interposed between them. The first piezoelectric substrate (1) and the second piezoelectric substrate (2) are arranged with a space created by at least two spacers (4a, 4b) between them in such a manner that the lower side of the first piezoelectric substrate (1) is opposed to the upper side of the second piezoelectric substrate (2). An input section is provided on one of the two piezoelectric substrates (1, 2), and an output section is provided on the other piezoelectric substrate. This piezoelectric transformer can provide high power output.
